

OpenBook OCR Software

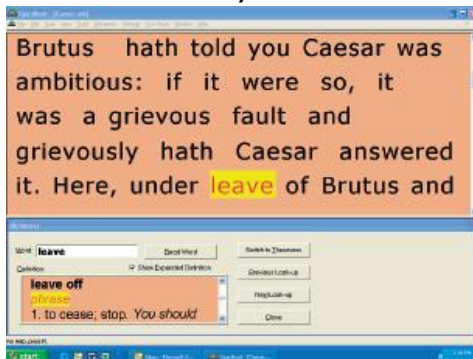

OpenBook is the world's leading OCR software developed for those who are Blind or Vision Impaired. It gives individuals a powerful tool to read, edit and manage printed text as well as text that is imbedded in graphics.

The software converts a printed page into electronic text to be read aloud through a voice synthesizer and shown on a customizable screen display.

Features

- User-defined settings for magnification, character spacing, colour and contrast
- Exclusive reading enhancement features
- Easy to use and flexible for both the novice and experienced user
- Included speech synthesizer
- Ideal for home, school and professional environments
- Fast forward / rewind feature
- Create MP3 or WAV files
- User-defined Bookmarks for easy navigation
- Convert OpenBook files into Grade II Braille formats
- Flexible settings
- Read Daisy files from Bookshare.org

Quickly read through the documents using Say All which automatically advances the pages, or move by words, line, sentences or paragraphs. The Skim Reading command provides a quick overview of the document content by reading the first of every paragraph.

Low Vision features:

- Customize Font Style
- Customize Size and Colour
- Text masking
- Switch to Exact View
- Zoom option
