

## SenseView Duo Pocket CCTV

When reading with a magnifying glass is hard or impossible, an electronic magnifier like the SenseView Duo could be a good solution.

The SenseView Duo is the slimmest and lightest portable magnifier in the world that has distance view. It travels easily in a handbag or coat pocket and can be used anywhere magnification is needed.

**The SenseView Duo has 2 built-in cameras.** One for reading and writing and one to be able to look at distant signs such as departure screens. It is even possible to zoom in. Because the screen is a WideScreen, more information can be seen on the screen than with regular units.

If you want to read any texts on high or low shelves in the supermarket, you can take a snapshot of it and read it off the screen while holding it at a comfortable height. The unit will store 20 snapshots.

The SenseView Duo has 7 screen modes. Full colour, enhanced colour, black/white, white/black, yellow/black, yellow/blue, blue/white modes. You can change the colour mode by simply pressing the mode button.

As the screen of the SenseView Duo is very bright, it has a Brightness control button to control the brightness. When you read in a dark place, decreasing the brightness make it more comfortable to read.

The SenseView has an internal rechargeable battery which provides up to 4.5 hours continuous use.

### Specifications

- 2 Full colour and 5 reading modes
  - 4.3 inch internal widescreen LCD. Magnification: 3 - 13 x
  - freeze frame (snapshot mode), battery indicator, brightness control
