

Topaz Desktop Magnifier

The Topaz desktop video magnifier is the latest generation CCTV and it combines a big height-adjustable LCD screen, easy to use controls and a big reading table.

The weight of the Topaz is just 14.5 kg which makes it the lightest of the 19" magnifiers available. Though the reading table is big, the footprint of the Topaz is only slightly bigger than or equal to the existing CCTVs.

Features in a nutshell

- Screen: big 19" or 22" LCD screen which is height-adjustable and tiltable to enable a comfortable reading position for people of all lengths. The anti-reflection surface eliminates glare and reflections from surrounding lights and windows which makes reading faster and more comfortable.
- Magnification: 3.0 – 64x (19" model).
- The Auto focus has an exceptionally large area of focus which is ideal for reading thick books and doing handcraft or needlepoint.
- The Reading table can hold 2 A4 sheets of paper. A newspaper will hang off much less than with the smaller tables.
- The Location pointer shows you the position the camera is looking at on the paper which makes it easier to orientate.
- The Lights are long-life lights that need no replacing. For photophobic people the lights can be switched off completely.
- Simple: easy to use because of the limited number of functions and control buttons which have different colours and simple icons. The unit is easy to set up: just a single power cord, no other connections need to be made.

Specifications

- Size: 600 mm high x 430 mm wide x 440 mm deep
- Weight: approx. 14.5 kg
- X/Y reading table size: 430 x 370 mm
